REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claims 16-19 is the inclusion of the limitations of a media positioning and printing system that includes an encoder system in operational association with the printhead assembly, the encoder system having an encoder shaft having an encoder traction roller securably attached to the encoder shaft, the label media riding along the encoder traction roller, and an encoder attached to the encoder shaft for monitoring the rotation of the encoder shaft and transmitting a signal to the controller the encoder including an optical source, an optical detector and a reflective optical disk that rotates with the encoder shaft, the reflective optical disk having a reflective pattern, the optical source generating an optical signal, and the reflective optical disk reflecting the optical signal back to the optical detector, the reflective pattern having non-reflective spaces, the optical detector not receiving a reflected optical signal when the optical signal hits the non-reflective spaces of the optical disk, thereby interrupting the optical signal; wherein, when the encoder shaft rotates, the encoder optical signal is alternately reflected and interrupted so as create a signal interruption, and when the optical signal is interrupted, each resulting signal interruption corresponding to a label media travel distance, the encoder sends a signal to the controller and the controller, based on the signal form the encoder, sends a firing signal to the printhead to fire the printhead in order to effect printing of the label media based on the label media travel distance. It is this limitation found in the claims, as they are

claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Moore et al. (US 6639581 B1) discloses an rotary-to digital encoder that can be coupled to various devices. Kato et al. (US 6631495) disclose Electronic document identification, filing, and retrieval system. Wiklöf et al. (US 6015241) disclose a printer feedback control and event library to compensate for and predict variable payout forces. Rosenberg (US 6,636,161 B2) disclose an isometric haptic feedback interface coupled to a host computer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
